CFS 100 Series

Single Phase AC or DC Power Testing Simplified...

Look no further for cost effective single phase AC or DC power test solutions than the compact CFS100 Series programmable power sources. Designed to perform a wide range of AC and/or DC tests with excellent performance and reliability, the APS CFS100 units are industry work horses.

Available in three power levels of 800 VA, 1600 VA and 4000 VA, a wide range of commercial, industrial and aviation type equipment testing is covered. The CFS108 can be operated from either 115V or 230V AC power. Models CFS116 and CFS140 can be operated from single phase 230V or split phase 208V AC power.

CFS100 Series Features:

- Choice of Power Levels to fit your Requirements
- AC and DC Mode Output Capability
- Wide AC Frequency Range of 40 Hz to 500 Hz covers both industrial/commercial and avionics/ defense applications
- Extensive List of Measurements
- Fifty Memory Locations with Nine Test Steps for Pass/Fail Measurements against pre-set Limits
- Voltage Drop-out Test Capability built-in
- Programmable Start/Stop Phase Angle
- Standard USB and RS232 Remote Control Interfaces
- Optional Ethernet / LAN Interface for ATE Test
 System Use
- Single Phase AC Input on all models
- CE Mark

EASY POWER TESTING OF AC OR DC PRODUCTS

Testing both AC and DC powered products for performance to specifications and proper operation has never been easier or more cost effective than with the CFS100 Series programmable power sources. These compact rack mountable units make it easy to test single phase AC products or DC powered products, all with the same instrument.

Available in three power levels, the CFS100 units feature an intuitive menu driven user interface with a large backlit LCD display that shows settings and measurements.

Two modes of operation are available to the user:

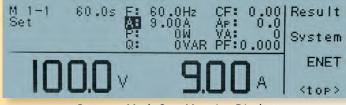

- Manual Mode Allows manual settings of all output parameters
- Program Mode Allows sequencing through up to 9 test steps, each having distinct output settings and measurement pass/fail test limits

Manual Mode or Pass / Fail Limit Testing

Manual Mode Setup Screen

Manual Mode allows setting individual output parameter settings and limits. By setting limits on voltage and frequency, accidental output settings that could damage an EUT can be avoided. When the Test Output button is pushed, power is applied to the EUT and the LCD screen displays all measurement values. Large characters are used for Voltage and one other parameter selected from the available measurements in the upper half of the display.

Program Mode Step Metering Display

AC or DC Output Connections

Programs can be stored in the 50 available non-volatile memory locations for quick recall. Each program memory can be assigned a name for easy reference to a test requirement or EUT. For quick setups of lab work, Manual mode is an easy way to change output values and observe measurement data without any limit testing.

Program Mode Setup Screen

Program Mode allows a sequence of up to nine timed test steps to be applied to the EUT. At each step, measurements are taken and compared to pre-set pass/fail limits. If all selected measurements pass, the output proceeds to the next test step once the programmed dwell time has expired. If not, an alarm sounds and the power to the EUT is cut. This mode is ideal for production test and pass fail testing without the need to develop test software.

Test Limits Setup Screen

All load connections are made at the rear panel. Both AC or DC output are available on the same output terminal strip. An output safety cover is provided.

Service and Support

Adaptive Power Systems' customer support is second to none. Our Customer Support Program provides the training, repair, calibration, and technical support services that our customers value. So, in addition to receiving the right test equipment, our customers can also count on excellent support before, during and after the sale. With company owned support and service centers around the world, support is never far away.
